Dear Necibe and Maia,

I enclose a proposal for minisymposium

Title: Immuno-epidemiological models

Organizer: Andrea Pugliese (University of Trento)

Topics: the minisymposium will present models working at the interface between the two levels: within-host models that bring insight towards epidemic dynamics, or epidemic models based on established immune-pathogen interactions.

Confirmed speakers:

- Rustom Antia (Emory University) *
 - Pengxing Cao (University of Melbourne)
 - Megan Greischer (University of Toronto)
 - Hayriye Gulbudak (University of Louisiana at Lafayette)
 - Jane Heffernan (York University)
 - David Kennedy (Pennsylvania State University)
 - Pejman Rohani (University of Georgia)
- and myself

* It is possible he would not be able to participate. If not, somebody else from his lab will.

As there are 8 confirmed speakers, I would ask for 2 blocks of 2 hours each for the minisymposium.

Please let me know if you need further information.

Best regards

Andrea
