

## Epic Math Battles: Counting vs. Matching—The Rematch

Jennifer Quinn, University of Washington—Tacoma

For more than a decade, two mathematical competitors representing the combinatorial techniques of counting and matching, have vied for superiority in competitions around the country. But this time will be different. In this tongue-in-cheek combinatorial competition, competitors create beautiful identities showcasing different “mystery ingredients” for each round. The competitors will be judged by the audience of experts at the Fifty-third SEICCGTC (both in person and remote) to *definitively* resolve the ultimate question “Which technique is mathematically superior: counting or matching?”
