On the Covering Number of $U_3(q)$

Michael Epstein, Florida Atlantic University

Any finite noncyclic group is a finite union of proper subgroups. Given such a group $G$, we define the covering number of $G$ to be the least positive integer $m$ such that $G$ is the union of $m$ proper subgroups. The aim of this talk is to present recent results on the covering numbers of the projective special unitary groups $U_3(q)$.

Keywords: group covering numbers, projective special unitary groups
