

## **Switched subgraphs of the symplectic graph**

Alice M.W. Hui, University of KwaZulu-Natal

A series of new infinite families of strongly regular graphs with the same parameters as some subgraphs of the symplectic graph are constructed. The construction is based on a method introduced by Godsil and McKay (1982), and is described in terms of geometry of quadric in projective space.

Keywords: strongly regular graph, symplectic graph, projective geometry
