

Lattice Paths in Corridors and Cyclic Corridors

Mateo Matijasevick*, Purdue University. Rigoberto Flórez, The Citadel. Javier González, Cristhian Pardo, José Luis Ramírez, Lina, Simbaqueba, Fabio Velandia, Universidad Nacional de Colombia.

We use discrete Fourier transform and generating functions to count families of paths of a given length in a corridor under different conditions. For example, we count Motzkin paths, colored Motzkin paths, Dyck paths, and Schroder paths.

Keywords: lattice path, Fourier methods, generating functions.
