

On the Structure of 4-Regular Planar Well-Covered Graphs

Art Finbow*, Bert Hartnell, Saint Mary's University and Michael D. Plummer, Vanderbilt University

A graph G is said to be *well-covered* if every maximal independent set of vertices has the same cardinality. In this paper we focus on the study of well-covered graphs which are 4-regular and planar.

Keywords: independent set, well-covered, 4-regular, planar graph
